

Alaska Aspen Workshop

September 12-14, 2017 starting in Fairbanks

Field tour: Fairbanks, Delta and Tok

This is a technology transfer-type forum where researchers and practitioners will share their knowledge and experiences in a field setting.

Topics we will explore include:

- Aspen ecology and occurrence.
- Management for ecological benefit (wildlife, fire behavior).
- Opportunities and techniques for management, treatment, and utility.
- Climate and fire.

The current distribution of aspen on the landscape is likely to shift with changing climate and fire regimes. How will these changes affect our management practices and intentions for ecological or other benefits?

This is an opportunity to address the various land ownerships and management objectives in an effort to accomplish common and complementary objectives.

This is a partnership event: Western Aspen Alliance, BLM Alaska, Alaska Northern Forest Cooperative, State of Alaska DNR & ADF&G, Alaska SAF

Contact: sue.rodman@alaska.gov or (907) 317-7236. Workshop logistics are posted at www.alaska.forestry.org/alaska/chapters/cook-inlet. Registration forms and payment are due by August 21st.
